

Release highlights iBase 10.1.2

This release of iBase introduces several significant enhancements and adds support for the latest versions of integrated software. In addition to bug fixes and other improvements, the key highlights are:

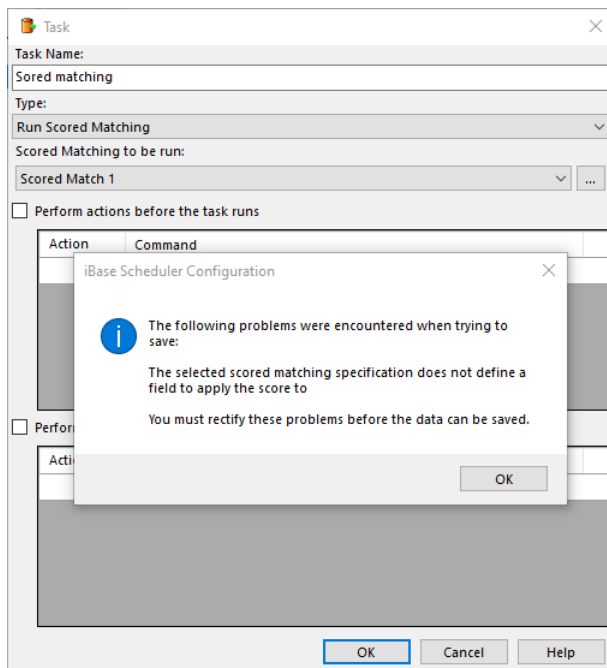

Scheduled Queries and Scored Matching: You can now automate your analytical processes by scheduling both queries and Scored Matching tasks to run at predefined times. This powerful new capability helps to save valuable analyst time and ensures that you are always working with the most up-to-date intelligence. This function you can find in the iBase Scheduler configuration:

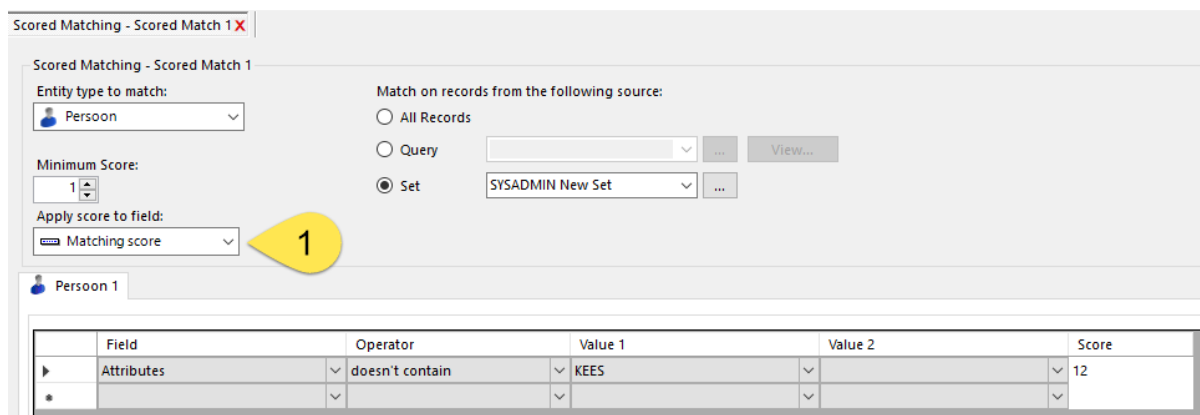

If you choose "Run Query", the result of the query will be written into an already existing set. You must therefore create this set in iBase in advance.

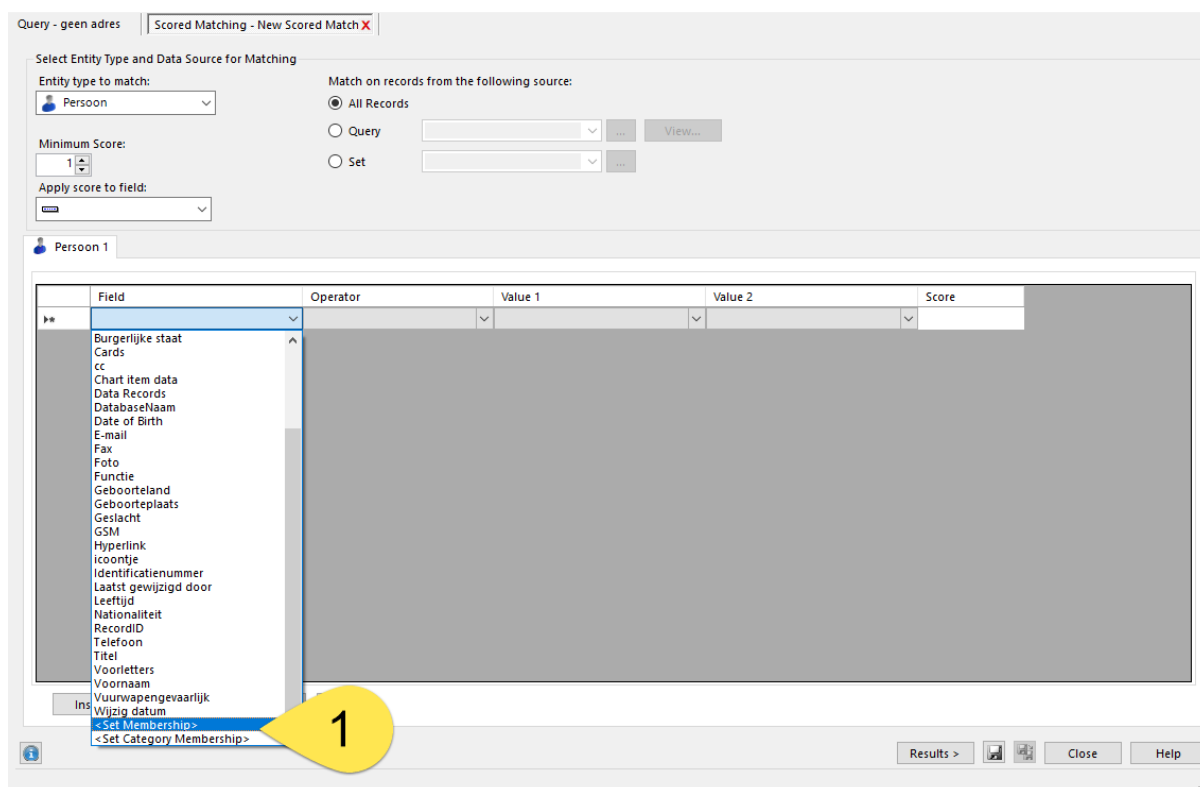

If you choose Run Scored Matching, you can choose an existing Scored matching definition, which must be able to write the result in a field at the entity.

You must set this up in the Scored Matching, but for this to happen, a Counting number field must be available for the entity.

- ✓ **Scored Matching Enhancements:** Scored Matching has been significantly improved to provide more targeted and flexible analysis. You can now score records based on their membership in a specific set, or by their presence in any set within a designated category (i.e. Folders in the tree under "All Sets" in tree on left hand side) This allows for more sophisticated matching strategies, helping you to prioritize records and uncover connections based on predefined collections of interest.

- ✓ **Support for Microsoft Office 2024:** iBase now supports Microsoft Office 2024.
- ✓ **Support for Esri ArcGIS Pro 3.5:** iBase now supports Esri ArcGIS Pro 3.5.

Fixes

Information about some issues is published in the i2 Support Portal. Click [here](#) to access the Portal and search on the DT issue number. If the issue you are looking for cannot be found, you can contact the [support of DataExpert](#) for further details.

DT number	Issue title
DT00524	Resolved an intermittent error that could occur when sorting by a column header.
DT00523	Corrected the clickable area for multi-line text fields to ensure the entire field is responsive.
DT00237	Addressed several issues to improve the reliability of the Geocoding feature.
DT00467	Fixed a problem that prevented database schemas from being updated.
DT00526	Resolved an issue that could cause records in a set to be lost in case control environments.

Release highlights Analyst's Notebook 10.1.1

The following new and updated features are available in this release:

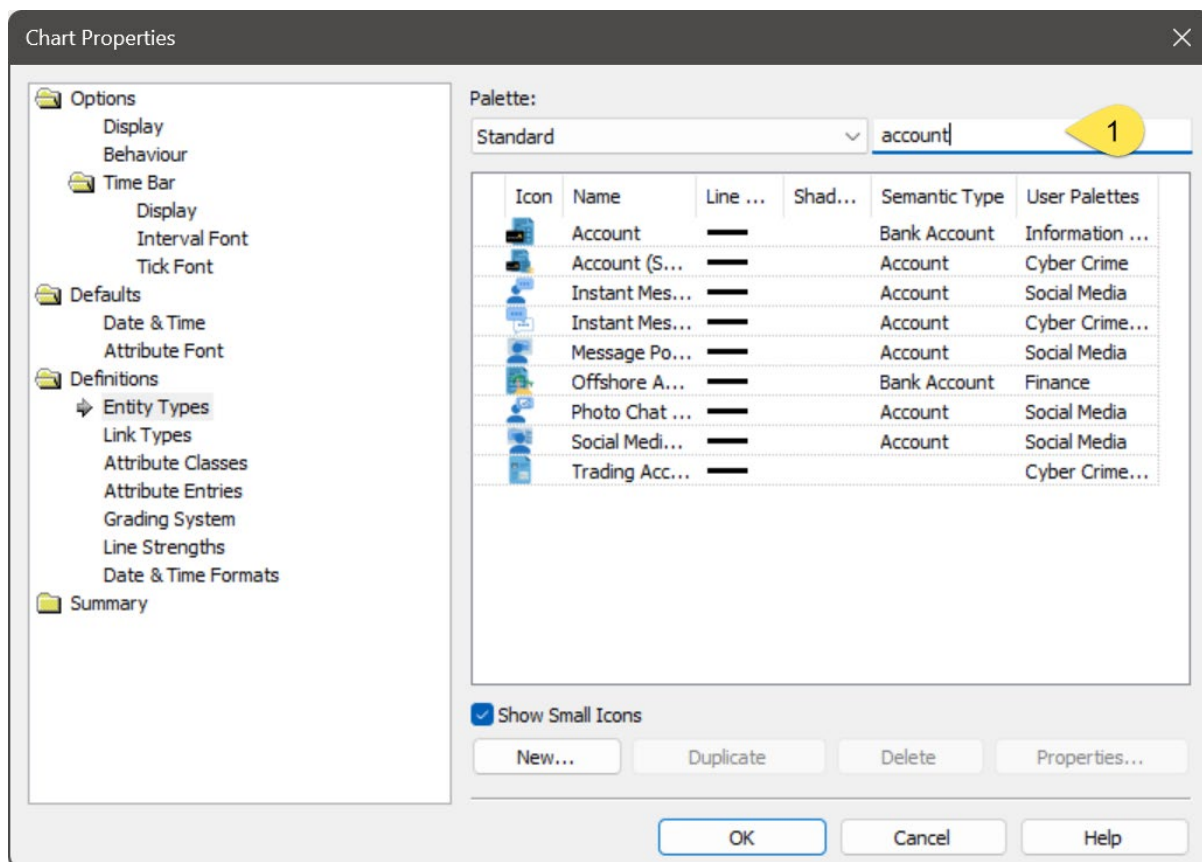

New Icons

- 70 new icons have been to address contemporary issues. The standard template similarly been augmented with new entity types using the additional icons.

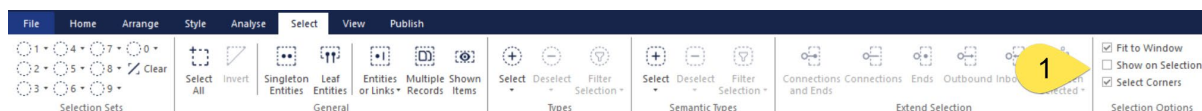

Filtered search for types and attributes

- Within the Chart Properties dialog you are now able to search through lists of entity and link types as well as attribute classes and entries to simplify finding the item of interest in long lists.

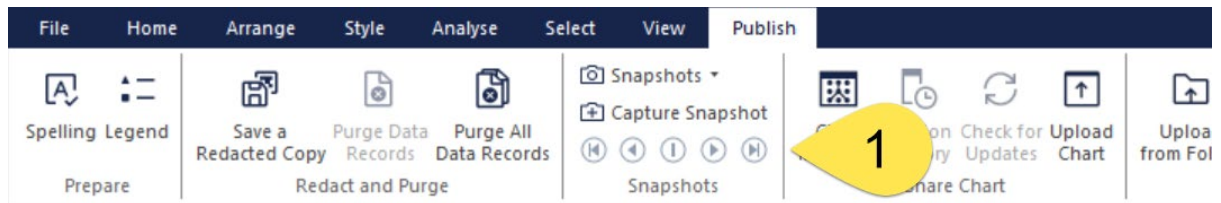

New selection options

- ✓ Additional selection options can be found in the Selection ribbon menu that apply when executing any of the selection command. They allow:
 - Automatically fitting the window to the selection.
 - Include hidden item and show on selection.
 - Control the display of corner handles for selected links.

Improved snapshot handling

- ✓ Within the Publish ribbon menu the creation and access to snapshots has been improved allow the user to:
 - Quickly create a new snapshot via a single click.
 - Controls to move to the next or previous snapshot in the sequence.
 - Controls to move to the first or last snapshot in the sequence.

Improved link corner behaviour

- ✓ Corners on links in charts will only display their control handles when the link is either hovered over or selected to reduce clutter on the chart.

Fixed Issues - Analyst's Notebook 10.1.1

Information about some issues is published in the i2 Support Portal. Click [here](#) to access the Portal and search on the DT issue number. If the issue you are looking for cannot be found, you can contact the [support of DataExpert](#) for further details.

Issue number	Issue title
DT00477	Failed to load picture error in ANB when setting chart item picture
DT00465	Link type "Link" disappears from "Common" palette after connecting to i2Analyze Server
DT00440	Spelling options are not persisted
